Imbiber Beads® AAT™
RE-DEFINING ENVIRONMENTAL SOLUTIONS

Activation Awareness Technology™ IMBICATOR®

An Industry First

Visual Spill Identifier

Packet In Water

Add: 590 ml Diesel

Activation (Pink)

Saturation (Red)

Activation Awareness Technology™ (AAT™)

Activation Awareness Technology™ (AAT™) is a color changing visualization process in which IMIBIBER BEADS® Spill Response Products change color in the presence of organic chemicals.

While unaffected by water, upon contact with organic liquids (oils, fuels, solvents) the packets change from **pink at activation** to a strong **red at saturation** providing an "alert" when the chemicals have been absorbed.

AAT™ is an invaluable tool to help responders recognize that IMBIBER BEADS® are working to address the spill.

> The IMBIBER BEADS® performed exactly as the manufacturer stated, aBsorbed fuels and left the water standing...the ability to capture & contain a free phase liquid is without equal...
>
> *– US Air Force - MEEP (MGMT Equipment Evaluation Program)*

IMBIBER BEADS® Superior Advantages

- Captures & contains spilled liquids completely and removes the risk of secondary contamination of personnel & environment; captured liquid cannot be released by any means
- Each IMBIBER BEADS® is capable of aBsorbing up to 27 times it's own volume making it the industry leader in sorption capacity
- Significantly reduces vapor concentrations in air (up to 600% less), in many cases to below lower explosive limit (LEL) minimizing risk of fire, explosion or inhalation of toxic fumes

> The IMBIBER BEADS® were effective in quickly reducing the explosive vapors. I highly recommend this for emergency responders when cleaning fuel and solvent spills.
